

Child's Name : BAHIANSE MAURI, Davi	Birthdate: March 13, 2018
School: St. Matthew	Grade: 1
Teacher: S. Dupont	Alberta Student Number (ASN): 315109801
Therapist: Colleen Lewis, R.SLP	Date of Report: June 18, 2025

INTERVENTION OVERVIEW

Davi participated in speech-language intervention from December 2024 to May 2025. This individualized intervention occurred in small group and/or one-on-one settings approximately once every 6-day cycle. Services were provided by this reporting speech-language pathologist as well as speech-language assistant, Shauna Lawrie.

INTERVENTION SUMMARY

Areas targeted within speech-language sessions this year included:

Receptive & Expressive Language:	- Expanding Davi's understanding and use of vocabulary, including categorization and matching, using visual supports (core vocabulary board, topic specific vocabulary board). GOAL MET - Increasing Davi's ability to follow classroom routines and simple directions during a structured activity, given verbal and visual supports. GOAL MET
Speech Sound Production:	Due to Davi's diagnosis of apraxia, parents were encouraged to pursue support through Alberta Health Services. Speech sounds were modelled and emphasized during sessions.

Davi was a pleasure to work with this school year. Speech-language goals were addressed primarily through literacy activities. He made significant gains in his ability to follow classroom routines and express his wants and needs using both verbal and non-verbal means. At the beginning of the year, Davi communicated primarily through physical means (e.g., reaching, grabbing, running) and single word approximations. In structured settings with consistent adult support, Davi is now able to make choices, request preferred items, and make comments during a structured activity using a combination of phrase level utterances, gestures, and/or visuals (core board/topic specific visuals). He can answer basic yes/no questions and match and label story specific vocabulary. He continues to develop his ability to answer basic wh-questions related to a story or activity, given visual choices. Sentence strips and adult verbal models were used to structure Davi's responses to wh-questions (e.g., "I found a ____"; "I see a ____").

Over the course of the school year, Davi benefited from several visual tools to support his behaviour and communication in the classroom. These visual supports helped Davi predict the daily schedule, follow instructions, follow the sequence of steps in activities, and predict the language required to communicate during a variety of activities.

- core vocabulary board flip-book with regularly used words (e.g., you, stop, go, want, more, all done, etc.) along with topic specific vocabulary boards for classroom activities (snack, drawing, alphabet board, etc.).
- visual schedule to support structure throughout the day and in specific tasks (e.g., getting ready to go home)
- choice boards to choose activities or toys
- sentence strips to facilitate phrase level speech (“I want __”, I see __”, I found a __”, etc.)

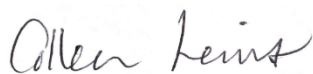

Adults are encouraged to continue to model speech sounds and sound awareness when reading books and during play.

RECOMMENDATIONS

The school therapy term has ended. In sessions, Davi demonstrated excellent progress towards targeted skills. Continued exposure and practice are important for maintenance of Davi’s skill development. Please refer to the strategies listed in the Appendix, which can be used to support ongoing skill development within the home and school environments.

Support for speech sound development (apraxia) may be available through Alberta Health Services’ Pediatric Community Rehabilitation. Davi’s parent or legal guardian can self-refer by calling the intake line at 403.910.2070. More information is also available at this [link](#).

It has been a pleasure to work with Davi this year. If there are any questions or concerns regarding the information in this report, please do not hesitate to contact me.

NOTE: Due to the developing and changing nature of children’s skills and abilities, the information and recommendations contained in this report are meant for current use. Any reference to or use of this report in the future should be made with these reservations in mind.

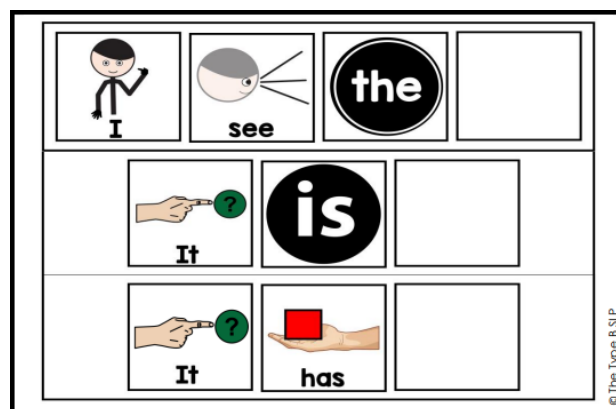

APPENDIX

STRATEGIES FOR CLASSROOM AND HOME

Expressive and Receptive Language:

- Go slow and show. Say less and stress important words. Simplify your sentences and show Davi what you are talking about by pairing speech with visuals and/or gestures.
- A structured routine with clear and consistent expectations be used to support Davi's understanding and participation in the classroom.
- Provide directions one step at a time and allow Davi time to process questions and directions before prompting him to respond. Use visuals to supplement verbal directions.
- Watch what Davi is interested in, and join in. Model single words and phrases related to the activity. Model new ways to play with toys and add ideas to his play.
- Provide Davi with many repeated experiences, exposures to storybooks, people games, and a variety of functional play activities.
- Adults should continue to expand what Davi says by repeating his utterance and adding one or two more words. For instance, if Davi says "crayon" an adult may model "the crayon is blue".
- Provide close-ended choices. For example, offer two choices and model a word or phrase paired with the visual/device for him to use to request an item. Use of visuals (e.g., gestures, actions, objects, pictures) to help attach meaning to words and language. Provide visual supports that help Davi predict the daily schedule, follow instructions, follow the sequence of steps in activities, as well as predict the language required for functional communication during a variety of activities (see examples below):

Example sentence strips for verbal expression:

Example core vocabulary board:

WordPower60 Basic

Speech Sound Development:

- **Be a good speech model for your child.** Children learn speech sounds from the people around them. Ensure that you are speaking clearly to your child. Speak loudly and slowly enough for your child to hear you.
- **Model and emphasize speech sounds.** Slightly emphasize the sounds that your child is having difficulty within your own speech. For instance, if your child is having difficulty with the “s” sound, you could slightly emphasize “s” in your own speech (e.g. ssun).
- **Monitor your child’s hearing.** Good hearing is important to learn to produce speech sounds. Hearing can fluctuate, for instance, if a child has an ear infection. Talk to your doctor if you suspect your child has an ear infection or has hearing loss.
- **Repeat back your child’s errors the correct way.** Put a little bit of emphasis on the corrected sounds. This way your child will hear the correct way to pronounce the sounds that they are still learning. Do not force your child to correct the sound themselves. For example:
Child: “Can we ting the dinotaur tong?”, Adult: “Of course we can sing the dinosaur song!”
- **Get down to your child’s level.** Communication will be as clear as possible when you are face-to-face with your child. Your child will pick up important information about how you use your tongue, lips, and teeth to speak.
- **Read stories loaded with sounds.** Your child will benefit from repeatedly hearing the sounds that they are still learning. Read stories that have sounds your child may need help with. Slightly emphasize your child’s target sounds when you are reading the book together. For instance, if your child is working on “s”, you could read books like “Silly Sally”

- **Be patient and stay positive.** Learning any new skill takes lots of time and practice. Speech sounds are no different. Keep on singing, reading, talking, and playing with your child. Have fun with your child.
